

SWITCH CAREER:

Front and Back-End Web Development Crash Course

Learning website development is a great way to jump in a new career or enhance your current career. Coding is the new math and learning how to code will propel you forward for any situation. Learn it today and get a head start for tomorrow regardless of your background, this course is guaranteed to set you on the right path to become a full-stack web developer.

If you've never experienced client and server-side web development, learning the plethora of technologies can be difficult. Trying to get started in a quick fashion can be daunting. But by learning from experience experts in the field, you can get up to speed quickly. In this course you will learn the basics of all of the different aspects of front and back end web development, and how to hone and keep your skills up to date. By taking a deliberately quick start approach to learning the basics and solid, fundamentals of HTML, CSS, JavaScript, and Back end web development with PHP and MySQL. This course is set up to be the starting point of learning web development.

This course is targeted at those trying to grasp the fundamental technologies that underpin our digital world, while assuming as little or no knowledge of programming as possible.

WHO SHOULD ATTEND?

1. This course is for anyone who wants to learn about web development, regardless of previous experience
2. It's perfect for complete beginners with zero experience
3. Anyone who does have some experience in a few of the technologies (like HTML and CSS) but not all or any IT officer with little or no knowledge of web development.
4. IT Managers looking to expand and upgrade their skills with the latest technology.
5. Professionals looking to save time by learning from experts.
